

Environmental careers — Save the world and earn a paycheck too.

Our planet's resources include soil, water, air, plants and animals. It's not only park rangers and activists who protect them. There are hundreds of jobs available for people passionate about environmental sustainability and conservation of resources. Explore career opportunities in all levels of government (federal, state, county, city and special districts) and in the private and nonprofit sectors as well. No matter what your major is or your personal strengths and interests, you can make a positive impact on the environment.

But first, a reality check...

-  Most of what you need to know, you will learn through work experience.
-  Having a good work ethic will advance you faster in your career than any professional experience.
-  You may need to start at the bottom and work your way up to more dynamic jobs.
-  Having a solid set of transferable skills will make you valuable to any company/agency.

Below are several college majors, followed by a few environmental careers related to that field of study.

Humanities/Liberal Arts
